September 26-27-28, 2017   Food Fraud Business Short Course
(Followed by the 9/28–9/29 Food Fraud Initial Screening Tool Vulnerability Assessment Workshop)

Executive Education Program Overview:
The Food Fraud Initiative (FFI) within the Master of Science in Food Safety Program and the College of Veterinary Medicine at Michigan State University is proud to offer this Executive Education program on Food Fraud Business, led by Dr. John Spink, Director of the FFI. This course is specifically tailored to those who need a thorough understanding of the fundamental concepts. The content is applicable to all functions and levels – from entry level engineers to executives.

The course is based on the graduate course Anti-Counterfeit Strategy and Product Protection (also led by Dr. Spink, since 2008). We examine Food Fraud prevention strategy building upon Food Science authentication to Situational Crime Prevention and Routine Activity Theory including the Crime Triangle: the fraud opportunity defined by the victim, fraudster, and guardian or hurdle gaps. We also address business decision-making concepts of Enterprise Risk Management and COSO Accounting Principles.

The format is very interactive and we keep the class sizes smaller for more one-on-one engagement. We incorporate many real-world applications and problem-solving exercises that will provide you with an effective framework for addressing your organization’s product protection needs. In addition, there are presentations by industry and agency experts, determined by the topics covered.

MSU’s Food Fraud Initiative contributes to or helps lead many of the world’s strategic Food Fraud prevention activities. MSU is a recognized leader in Food Safety education as well as Food Science scholarship. Recent activities have expanded to include leadership in Dietary Supplement Fraud and Veterinary Product Fraud. Other projects are contributing to assessing the vulnerability and risk.

Concepts Covered:
